

A System for Obtaining and Tracking Up-to-the-minute Delivery Locations of Employees via a Database System

Abstract of the Disclosure

5 This present invention is a method and system for providing an up-to-the-minute location of a recipient for delivery of a message. A computerized system imports corporation databases containing employee location codes and delivery preference information (as well as addresses for various message media such as FAX telephone numbers, E-mail addresses, Pager telephone Numbers, etc.) to a database in or
10 accessible by the corporation's Mail Room. The system includes WEB-based and telephone access to this information to allow employees to keep this information up to date.
